

ENERGIZED SERVICES

WE DO THAT ... & MORE

Keep critical high-voltage lines in service with minimal disruption by trusting our highly skilled live-line crews to reliably repair and upgrade the power grid. Michels Power invests in the rigorous training and specialized equipment required to safely and efficiently handle energized lines from 4kV up to 765kV without requiring outages. We follow strict safety protocols and possess a deep knowledge of electrical theory and emergency procedures.

Our crews offer a range of services, including power line repairs and upgrades, while leveraging the latest in conductive suits, specialized cranes, cutting-edge bucket trucks and power arms.

Our extensive experience in energized projects allows us to provide tailored solutions to meet the challenges of the evolving industry. From replacing individual insulators and structures to full-circuit reconductoring, we deliver a wide array of diverse energized line solutions in a variety of settings and situations.

Our Commitment to Safety & Reliability

We prioritize safety and reliability, upholding rigorous protocols to protect our workers and maintain the integrity of your services.

Safety is the cornerstone of our culture.

Expertise & Experience

National Grid (UC G) energized insulator replacement project: Michels safely and efficiently replaced all dead-end insulators associated hardware on more than 150 115kv structures, all while energized. A combination of hot stick techniques and barehand line workers performed the work, utilizing ladders to eliminate civil requirements and reduce expense.

Eversource barehand/live-line maintenance project: This is an ongoing multi-state, varied-scope energized service project started in 2015. Upwards of 200 electrically qualified workers perform energized maintenance and capital construction projects across the Eversource system. Full tension dead-end replacements, structure replacements, energized reconductors, energized OPGW replacement and hot lightning arrestor installation are all performed daily without the need for outages.

Continuous Power Delivery

Michels Power specializes in live-line and barehand techniques to ensure your service remains uninterrupted during maintenance and upgrades.
