

NATURAL GAS-TO-POWER SOLUTIONS

WE DO THAT ... & MORE

Reliable power is essential to hyperscale data centers and other mission critical facilities. Utilizing our extensive experience with pipeline and facility construction, Michels delivers customized combinations of self-performed specialty services, resulting in turnkey solutions for power needed to keep critical systems running.

Our natural gas-to-power generation and transmission services include:

Natural gas power generation facilities	Duct banks & conductors
Transmission pipelines	Earth retention & foundations
Earth work & mass excavation	Ground improvement
Communications systems	Structural concrete

Power to the Project

At times, multiple sources are required to meet the power demands of data centers and other mission critical facilities. Michels has been helping customers meet their power generation and transmission needs for decades.

In addition to natural gas-to-power facilities, our power generation solutions include other traditional and renewable sources.

- Hydrogen electrolyzers
- Solar farms
- Wind farm
- Energy storage facilities
- Power substations
